A new syrup that cures Alzheimer disease has been discovered

Chennai, March 17:

It has been discovered that pure maple syrup extracts are useful in preventing the cell degeneration in brain due to alzheimer disease.

A Seminar was organized by American Chemical Society for two days on preventing neurological diseases. In this seminar, scientists from international arena participated and shared 24 positive research results that revealed the effects of natural products. In particular, they discussed about Alzheimer disease.

In this seminar, It was revealed that pure maple syrup extracts are useful in preventing the cell degeneration in brain due to alzheimer disease.

Describing the new discovery, Dr. Sheela Krishnasamy the Nutritionist said “It has been found that Alzheimer is one of the fast spreading diseases in India. Genetics, life style and environmental factors are the cause for this alzheimer disease.”
